

Seaport Security

Insights beyond the technology

Need for Port Security

The terror attacks of September 11th raised the global awareness about terrorism and its impact on the world economy. The potential to ship explosives, weapons, chemical material and “dirty bombs” into unsuspecting harbors has become a major threat to the global community. Governments around the world have realized that the terror organizations – in their attempt to disrupt globalization and modernization – regard trade, open seas and ports as high-value targets. However, due to the complexity of today’s trade processes and practices, countries have come to realize that securing the entry point alone is insufficient; the entire supply chain must be secured – beginning with seaports – as they often represent the weakest point in the chain.

In addition, ports face an added level of threat with the continued rise of criminal activity. In light of these risks, combined with the inherent difficulties in securing such facilities, the challenge of port security has become evident.

General highlights:

- *Inherent Vulnerabilities*
- *Terrorism*
- *Criminal Activity*
- *ISPS Code*

Security Highlights

- Need for Smart, Integrated Security Solutions
- Magal S3 – Supplying Comprehensive Seaport Security
- Integrated Security Approach – From Concept into Working Reality
- Magal S3's Solution – Making a Difference
- Implementation – From Start to Finish, Without Compromise
- Terror attacks against seaports and maritime operations
- Examples of Magal S3's customized port security installations
